D82847

membrane protein XF0103 [imported] - Xylella fastidiosa (strain 9a5c)
C;Species: Xylella fastidiosa
C;Date: 18-Aug-2000 #sequence_revision 20-Aug-2000 #text_change 20-Aug-2000
C;Accession: D82847
C;Accession: D82847
R;annoymous, The Xylella fastidiosa Consortium of the Organization for Nucleotide Seq
Nature 406, 151-157, 2000
A;Title: The genome sequence of the plant pathogen Xylella fastidiosa.
A;Reference number: A82515; MUID:20365717
A;Note: for a complete list of authors see reference number A59328 below
A;Accession: D82847
A;Status: preliminary
A;Accession: D82847
A;Residues: 1-443 <SIN-

A;Title: Complete genome sequence of Pseudomonas aeruginosa PA01, an opportunistic |
A;Reference number: A82950; MUID:20437337

A;Accession: G83602

A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-461 <5TOO
A;Cross-references: GB:AE004472; GB:AE004091; NID:g994618B; PIDN:AAG03734.1; GSPDB:(A;Experimental source: strain PA01

"LAT2, a new basolateral 4F2hc/CD98-associated amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 TRANSPORT PROTEIN SLC3A2/4F2HC.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (PROBABLE).
TISSUE SPECIFICITY: MAINLY EXPRESSED IN KIDNEY AND INTESTINE.
SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MANY AMINO ACID
PERMESSES. GLYCOPROTEIN-ASSOCIATED AMINO ACID TRANSPORTERS (G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BIOL. Chem. 274:19738-19744(1999).

BIOL. Chem. 274:19738-19744(1999).

BUNCTION: SODIUM-INDEPENDENT, HIGH-AFFINITY TRANSPORT OF LARGE NEUTRAL AMINO ACIDS. HAS HIGHER AFFINITY FOR L-PHENYLALANINE THAT LATI. L-ALANINE IS TRANSPORTED AT PHYSIOLOGICAL CONCENTRATIONS.

PLAYS A ROLE IN BASOLATERAL (RE)ABSORPTION OF NEUTRAL AMINO ACIDS.

SUBUNIT: DISULFIDE-LINKED HETERODIMER WITH THE AMINO ACIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBFAMILY.
